

Line Scan Lens

XENON-ZIRCONIA 3.2/92, beta' = -2.0x for use with Beam Splitter Prism (BSP)

This lens is optimized for the use with 12k pixel line scan sensors and can also be used with 16k. It is broadband coated and can be used in the spectral range of 400 – 1000 nm. The V-mount makes it easy to install and rotate into the desired azimuth position for a wide range of line scan applications.

- F#4.0 shows optimum performance and a homogenous MTF @ 50 lp/mm as well. Performance is close to diffraction limited over the whole field. At f#4.0 the lens is free of artificial vignetting.
- At F#4.0 and F#5.6 a resolution of 72 lp/mm is achievable.
- F#3.2 allows maximum light throughput (about 1.6 times more than at F#4.0 on axis) and still shows good MTF over the field. The light fall-off at F#3.2 towards the edge still grants appr. 1.4 times more light compared to F#4.0.

Please note that this lens works only properly with a 25 mm (BK7) Beam Splitter Prism at the object side.

If a pellicle is used instead of a BSP a different lens (designed without 25 mm BK7) has to be used.
